Title : The Change of Activity of Hyaluronidase in vivo
in Repeated Introduction of Salicylates

Orig Pub: Bratisl. lekar. listy, 1957, 2, No 10-11, 600-606

Abstract: Five-day-long introduction of salicylates (I) to rabbits led to a decrease of hyaluronidase activity, which was less from a dose of 0.23 g/kg of I than from a dose of 0.69 g/kg. During the first and second day, this effect was most expressed. In subsequent days, its decrease was observed. - From the authors' resume

2183. PATHOLOGICAL BIOCHEMISTRY OF LIVER FAILURE - Patologická bio-
chémia pečenového zlyhania - Niederland T. R. III. Intern. Klin. Lék.
Fak. Univ. Komenského; Vedecké Lab., Farmakobiokh., Bratislava -
VNITŘNÍ LÉK. 1958, 4/10 (872-881) Graphs 5 Illus. 1

In the first part of this paper, the modern conception of pathological failure of the
function of the liver is dealt with. It is emphasized that these conceptions, supported
exclusively by the disturbance of the metabolism of ammonia in the brain, are not
capable of explaining from the biochemist's point of view the failing of reactions in
the organism, the result of which is an acute failure of the liver.

Zmeny hladiny glykogénu v pečeni, priečne pruhovanom svale a v myokarde po veľkých dávkach salicylanov - Niederland T. R., Gvozdják J. and Erixová E. Úst. pre Všeobecnú a Klín. Biochém. Lek. Fak. Univ. Komenského, Bratislava - BRATISL. LEK. LISTY 1958, 38 (1)/7 (385-393)

Tables 3

Toxic doses of salicylate cause a drop of liver glycogen to practically zero. In striated muscle the glycogen content drops to less than 10% of the original value. The glycogen level of myocardium dropped in an acute series of rabbits after toxic doses of salicylates from 207 mg./100 ml. to 121 mg./100 ml., in the peracute series from 362 mg./100 ml. to 30 mg./100 ml. At 2-3 hr. before death the blood glucose value drops to 25-40 mg./100 ml. The low liver glycogen level cannot be attributed to energy consumption in the stage of convulsions.

TITLE: Metabolic activity of the kidneys ⁵³ This paper was presented at the 29th Meeting of the Hungarian Physiological Society held in Szeged from 2 to 4 July 1964/

SOURCE: Academia scientiarum hungaricas. Acta physiologica, v. 26, Supplement, 1965, 63

TOPIC TAGS: biologic metabolism, rat, dog

ABSTRACT:

It has been shown earlier that the kidneys of rats take up glucose or release it into the blood stream depending on its concentration in arterial blood. The uptake of lactic acid also depends on its level in arterial blood. Similar findings were made on dogs where the same results were also obtained with free fatty acids. The present.

Card 1/2

L 15512-66

ACC NR: AT6007472

0
experiments were carried out to confirm the free fatty acid uptake in the rat and to compare the mutual relationship in the uptake of the compounds mentioned above. It was found that free fatty acids and their esters are taken up in rats, depending on their arterial blood concentration, similarly to dogs. An inverse relationship was found to exist between the uptake of free fatty acids and glucose. In most instances, when glucose is taken up, free fatty acids are released and vice versa. On the basis of these results it is assumed that 1) the kidney participates in the homeostasis of energy metabolism, 2) the energy needs of the kidneys are supplied by glucose or lipids according to their blood concentrations. Abstract: In Czechoslovakia salicylates are used for only two purposes: as an analgesic and an antirheumatic. There are however three other important uses of these chemicals. Lowering of the level of cholesterol in blood, increase in basal metabolism, and decrease in glykemia. The program dealt with the following subjects: salicylanes in the organism, metabolism influence in- flamed upon inflammation processes, influence upon epidermal surfaces, and toxicity. No references.

TITLE: Symmetry of the dynamic system matrix which enables stability analysis by the generalized Hurwitz criterion to be used in a stability analysis

SOURCE: Gliwice. Politechnika Slaska. Zeszyty naukowe, no. 132, 1965. Automatyka, no. 6, 1965, 127-144

TOPIC TAGS: dynamic system, matrix element, characteristic equation, ~~quasi-skew symmetric matrix~~, Hurwitz criterion, stability ^{analysis}, ~~matrix element~~

ABSTRACT: A quasi-skew symmetric matrix has been defined, and nine theorems concerning its properties have been presented. It has been shown that the quasi-skew symmetric form of a matrix remains constant with summation, multiplication, and inversion of quasi-skew symmetric matrices. It has been proven that a quasi-skew symmetric matrix has only complex conjugate characteristic roots. An associated matrix of order n with complex elements has been defined for every quasi-skew symmetric matrix of the order $2n$. It has been proven that the characteristic roots of the associated matrix constitute a complex nonconjugate subset of the set of complex conjugate characteristic roots of the original matrix. Hence, it is possible to analyze the stability of a dynamic system described with a quasi-skew symmetric

Card 1/2

L 36165-66

ACC NR: AT6014887

matrix of the order $2n$, using as a starting point a proper associated matrix of order n . A criterion for this purpose has been proposed; the criterion is a generalization of the Hurwitz stability criterion for a characteristic equation with complex coefficients. An example of a dynamic system described with a quasi-skew symmetric matrix has been presented. Orig. art. has: 7 formulas. [Based on author's abstract.] [AM]

"The Question Whether Hashimoto's Struma Represents a Preblastomatous Condition."

Budapest, Magyar Sebészeti, Vol XIX, No 2, Apr 66, pages 87-90.

Abstract: [Authors' Hungarian summary] The joint occurrence of Hashimoto's struma and malignant thyroid tumors is relatively frequent and, therefore, Hashimoto's struma should be looked upon as a preblastomatous condition. A case is described in which Hashimoto's struma was accompanied by a non-differentiated, malignant thyroid tumor. Hashimoto's struma arises on the basis of an autoimmune mechanism and, therefore, many authors advocate the exclusively conservative treatment of suspicious changes. In the knowledge that Hashimoto's struma is a preblastomatous condition, this procedure is disapproved of by the authors. 4 Hungarian, 25 Western references.
